

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	30 September 2026
Team ID	MKU201Team26ab4da31a238dc999eb5cc00
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Flow Creation	Create the "Standard Laptop Task" flow in Flow Designer (Global application, Run As System User) Configure Service Catalog as the flow trigger
FR-2	Catalog Task Automation	Add the Create Catalog Task action mapped to the Requested Item record Set Short Description and Description as "Laptop need to be Configured" Assign the task automatically to the Hardware group
FR-3	Flow Assignment	Open the Standard Laptop item in Maintain Items Remove existing Process Engine automation Select Flow and attach the "Standard Laptop Task" flow
FR-4	Service Catalog Ordering	Order Standard Laptop from Service Catalog > Hardware using Order Now Generate the Request Number and display the Order Status
FR-5	Request Approval	Open the Approvers section of the request record Approve the request using the Approve option
FR-6	Task Verification	Open the Requested Item record and its Catalog Tasks section Verify the task shows the correct Short Description and Assignment Group

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Simple catalog ordering through Order Now, with a clear Order Status and Request Number; no manual effort needed to raise the configuration task.
NFR-2	Security	Flow runs as System User; the configuration task is restricted to the Hardware group and requests require approval by authorised approvers.
NFR-3	Reliability	Every approved Standard Laptop request consistently generates a Catalog Task, so configuration is never overlooked or delayed.
NFR-4	Performance	Catalog Tasks are created automatically as soon as the request is approved, reducing user wait time and manual intervention.
NFR-5	Availability	The flow runs on the ServiceNow cloud platform and stays active once activated, so laptop requests can be raised and processed at any time.
NFR-6	Scalability	The flow handles growing volumes of laptop requests and can be reused or extended to other catalog items and assignment groups.
